2. Two new treatment options have been found to be effective for advanced prostate cancer. The first treatment is for non-metastatic hormone resistant prostate cancer. The second treatment combines enzalutamide with Androgen Deprivation Therapy in those with metastatic hormone sensitive prostate cancer.

3. This research report describes the Performance and Impact of Prostate Specific Membrane Antigen-Based Diagnostics in the Management of Men with Biochemical Recurrence of Prostate Cancer and its Role in Salvage Lymph Node Dissection. The use of PSMA diagnostics has improved the rate of how well metastatic PC is identified across a wide spectrum of severity.
